TCI Announces Availability of DecisionLender 4.0 Loan Origination Software
Configurable Web-based Solution Offers Lenders Real-time Control Over Workflow, Risk Management and Compliance

Islandia, NY, June 18, 2015 – Teledata Communications Inc. (TCI), a provider of cloud-based loan origination solutions for credit unions, banks and finance companies, announced the release of DecisionLender 4.0, the next generation of its industry-leading SaaS (Software as a Service) loan origination and decisioning technology. TCI's technology automates loan origination processes for both direct and indirect lenders to support purchases of a variety of consumer-financed products, including automotive, power sports, lifestyle, furniture, and appliances.

The enhanced DecisionLender solution enables banks, credit unions and finance companies to configure rules, rule results, permissions and authority-based workflows, exception detection and tracking, reports and other features, to suit their own specific business practices. In addition, DecisionLender 4.0 offers the full functionality, security and compliance capabilities that lenders have come to expect from TCI.

Recognized as one of the financial sector's foremost loan origination platforms, the new DecisionLender 4.0 offers a modular architecture that enables lenders to customize features and processes for fast and efficient decisioning and delivery, while leveraging TCI's longstanding ability to provide the highest level of data security and compliance tools. By using a broad set of configurable tools, lenders can develop and manage specific client functions in-house. This flexible design gives lenders the freedom to tailor product functionality to conform to their policies and processes without the disruption that is typically associated with software modifications.

DecisionLender 4.0's enhanced features include:

Configurability: Lenders can manage and execute changes in decisioning strategy, criteria-based pricing and detailed rules management. DecisionLender 4.0 enables lenders to apply automatically calculated fees, product additions, discounts and reserve modification for greater flexibility throughout the loan process.

Alerts and Dashboards: Customizable Alerts and Dashboard pages provide staff with real-time pertinent information, including messages and notifications, and visibility into key operational, production and goal-oriented metrics and analytics.

Workflow: Lenders can configure processes to meet evolving operational requirements, and expedite decisioning and loan processing. Routing capabilities direct specific exception issues to

appropriate intermediary steps based on policy and exception override authorities. Workflow can also be driven by loan type and application source characteristics.

Compliancy andAuditing: DecisionLender 4.0 contains full audit reporting implemented at every stage of the application loan cycle, and for all administrative and setup functions. The feature incorporates search capabilities for reports, logs and other data, giving lenders a powerful resource to control and audit all actions, including administrative activity.

Reporting: DecisionLender 4.0 enables lenders to create their own reports, and provides real-time visibility into a number of performance-based data analytics. This tool helps lenders gauge the efficacy of their organizations, and helps managers adjust their lending criteria and procedures to improve operations or adapt to market conditions.

"Today's banks, credit unions and finance companies face enormous pressure to generate loans in a fast, efficient, yet responsible manner," said William Nass, founder and president at TCI. "DecisionLender version 4.0 has been specifically developed to give lenders the control and management tools they need to originate a wide variety of loans. Just as important, our customers can be confident that DecisionLender provides the highest level of data security and compliance functionality, ensuring that lenders can meet existing and emerging lending regulations."
